Geriatric Medicine Consult

Ingrid Solheim, MD - 09/12/2026 11:20 - Signed

Reason for consult: Cognitive evaluation after confusion cleared.

Montreal Cognitive Assessment 14 of 30 today, after the infection was treated. Consistently oriented to person only. Could not state the month, year or why he is in the hospital. Could not name his medications or their purpose. On a four-compartment pill box task he placed 0 of 4 correctly.

History from his former landlord fits a gradual decline over at least 2 years. Assessment: major neurocognitive disorder, probable Alzheimer type, moderate stage. He lacks the capacity to manage medications or live without supervision.

RECOMMENDATIONS

- Needs 24-hour supervision. Memory care or skilled nursing level of care.
- Start donepezil 5 mg nightly.
- Adult Protective Services referral placed. Public guardian evaluation for conservatorship requested.
- Not safe for a setting where residents manage their own medications.
